Android Developer Job Description

About you and the role
We're looking for a mid-senior level developer who has an excellent understanding of the fundamentals of Kotlin development and is looking for an opportunity to develop their skills through the building of a high spec product.

You will work alongside our Lead Android developer in introducing new features into the application as well as improving the existing features, both from a UX and a code perspective.

You will be looking to learn at every opportunity and won't be afraid to challenge.

We are seeking someone with 3+ experience in:
- Kotlin
- MVVM
- Jetpack components (ViewModel and LiveData at least)
- Networking (RESTful API), retrofit
- Git
- Coroutines
- Software architectures (MMVM + Repository, Clean architecture)…
- Dependency injection frameworks.
- **Unit testing.**
- Mockk (Unit testing framework)

Also Desirable:
- MVI
- Realm database
- Firebase
- Instrumentation test (Espresso)
- CI/CD
- Experience in social media applications

Working within a small but growing team, your teamwork and communication skills will be key to our success.
